

Performance Perspective

The returns of the selected commodities based on the futures prices of most liquid contract month are calculated to look at the performance of commodities as an investment alternative. The returns are calculated based on closing prices of respective days/periods. There are a number of factors that affect the returns of the commodities, which not only emanate from the domestic front but also reflect the global demand-supply equilibrium. While it is true that the returns delivered in the past are not a reflection or indication of the returns that would accrue in the future, it is nevertheless interesting to compare the same and analyze these differences.
