To Whomsoever It May Concern

This is to certify that the tested application hosted of the current version is free from any severe vulnerability/threat and safe to carry out transaction.

The application has passed Critical / High / Medium vulnerabilities for application security assessment tests.

For detailed description of vulnerabilities and other security assessment related details, please refer to the audit report shared with respective client.

It is also recommend that the application may be hosted with read and script execution permission for public with exact replica of the audited URL in the production environment.

Certificate Validity: The maximum validity of the certificate is One Year from the date of issue

Note: Our opinion is valid for the period during which the changes are not made in the source of tested application thus any changes in the system will require to re-audit of application's new version. Projections of any conclusions based on our current findings will not be applicable and has to be altered for future period and application new versions is subject to any risks because of changes made to the application or system. Also we recommend that Web Server and OS level hardening need to be in place for production server.

Thanks & Regards,
